Content:

The process of creating a contribution to the knowledge or to the tools of the scientific community is nearly independent from the specific field of research or application:

Starting from an innovative idea, the novelty of the idea has to be investigated, the abstract idea has to be modeled, implemented, evaluated, and finally described in a precise and comprehensible manner.

During the project, this scientific process will be explored on examples of computer vision tasks.

Small project teams will handle the whole process starting from provided ideas to a final summary of the scientific findings - which (if suitable) will be submitted to computer vision conferences.

The first project meeting is going to take place on 17th October 2017 at 12:00 o’clock in room MAR 6.051.
